## SUPPLY CHAIN FORUM

# Shaping Tomorrow's Value Chains Today

When perfectly synchronized, they make businesses more profitable. That's because, in addition to ensuring the supply of goods and services, they also offer significant competitive advantages that pay off across all stages of production and logistics. Supply chains then become value chains, delivering critical added value to help businesses thrive.

But how do you turn your supply chain into a bonanza for your business? What are the modules that make up a successful value chain? What is the digital infrastructure you need to maximize the benefit?

The Supply Chain Forum 2022, hosted by Siemens Digital Logistics, lets you experience live how profitable value chains are created. Companies from the industrial and logistics sectors offer real-world insights into the concepts, goals, and results of their value chains. We track trends and look into what will define the industries and markets of the future. Experience firsthand the issues driving the logistics of today and tomorrow.

The industry meetup of leading supply chain experts will take place this year for the first time as a hybrid event on May 4, 2022. It's the best of both worlds: Attendees can join us live on site at the Frankfurt Hilton Airport Hotel or virtually through our online platform. Both formats offer the opportunity for networking and personal dialog with experts.

We look forward to welcoming you at the Supply Chain Forum 2022.

## Dialog Stations

Get in touch with our experts and find out about news in our software portfolio as well as the latest use cases – available both **on-site in Frankfurt and online**.

### AX4 News
